

Matt's Personal Operating System

Strategy & Roadmap | January 2026

Executive Summary

This document captures the strategic decisions, prioritisation framework, and automation roadmap developed to optimise Matt's work and life systems during a critical transition period: preparing for a baby (October 2026), changing primary income source (State Street), moving house, and building a side product (Deal Committee).

The Situation

Current State

- Income: £10k MRR (expecting £12.5k by March)
- Net wealth: ~£100k (target: £500k by end of 2028)
- Baby arriving: ~October 2026
- House move: Within next 3 months (lease ends July)
- Holidays: Montenegro, Greece, Annecy (June)

Income Streams

- Fractal Labs: £8k/month — primary income, contracting as PM/builder across 3+ projects
- GM/Noxfolk: £3.2k/month — building dashboard, Head of Systems role (~3 months remaining)
- State Street (potential): \$200k base + \$80-100k bonus — AI initiative rollout role
- Deal Committee: Side product with potential partner — MVP complete, GTM phase

Strategic Decisions

The chosen path:

State Street = Primary income (targeting £220-235k)

GM/Noxfolk = Keep for now (£38.4k/year), natural expiry in ~3 months

Deal Committee = Build on the side with partner (50/50 equity, ~10 hrs/week → 2-3 hrs with agentic coding)

Fractal Labs = Exit gracefully once State Street confirmed

This approach:

- Hits the £200k income goal immediately (and exceeds it)
- Provides stability before baby arrives
- Allows Deal Committee to grow as an asset without income pressure
- Creates runway for the £500k wealth target

Timeline: January → October 2026

Period	Key Activities
Now → March	Resume prep, State Street conversations, Fractal as normal
March → April	Trips (Montenegro, Greece), Deal Committee partnership formalised
April → May	House move, potential State Street offer/negotiations
May → June	Annecy trip, likely State Street start
June → July	Settle into State Street, wind down Fractal, house settled
Aug → October	Stable rhythm before baby, Noxfolk likely wrapping up

The Problem: Cognitive Overhead

Core Pain Points

The biggest drain is not the volume of work, but the cognitive overhead of figuring out what to do next. This manifests as:

- Context-switching between GitHub, Slack, Teams, email, and roadmaps to determine priorities
- Client update communications (Looms, status updates) taking disproportionate time
- Chasing team members to check if work has been completed/merged
- Monitoring multiple communication channels (2 Slack workspaces, Teams for TG, multiple email accounts)
- No carved-out time blocks — reactive "jump on whatever's urgent" mode
- Personal tasks from Grace occasionally falling through cracks

What's Working

- Weekly planning ritual in Notion — grounding and effective
- Weekly review with AI — good for reflection
- Personal budgeting with Grace — clean monthly system
- Todoist for shared tasks — effective for coordination
- Core habits (morning routine, sleep, exercise) — stable foundation

The Strategy: Claude as Command Centre

Design Principles

- **Single hub:** Don't layer chaos on chaos — consolidate, don't add tools
- **Claude as agent:** Use this Claude Project as the central interface for planning, thinking, and automation
- **Product mindset:** Treat personal systems like a product — prioritise, sequence, iterate
- **Agentic leverage:** Use Claude Code to reduce 10 hrs of work to 2-3 hrs where possible

Available Integrations

- Notion — Goals, weekly tracker, pregnancy planning, Deal Committee docs
- Google Calendar — Meeting visibility, schedule awareness
- GitHub — Code repos under single account (needs access grant)
- Slack — 2 workspaces with app/integration access
- Google Meet transcripts — Auto-generated, in Google Drive

The Roadmap

Phase 1: Foundation (This Week)

Goal: Establish Claude as single command centre

1.1 This Claude Project = Hub

All weekly planning, reviews, and "what should I do" questions happen in this project. No new tools to learn.

1.2 Morning Briefing Prompt

A daily prompt that pulls: today's calendar, Notion weekly goals, and suggests a focus for the day. Replaces the "staring at GitHub/Slack trying to figure out what to do" feeling.

1.3 Deal Committee Partnership Proposal

One-pager for Tuesday meeting covering: equity split (50/50), decision rights, time commitments, exit terms, first 90 days focus.

Phase 2: Automation Quick Wins (Next 2 Weeks)

Goal: Reduce repetitive work

2.1 "What Shipped This Week" Generator

Script that pulls merged PRs/closed issues from GitHub repos, formats as bullet points. Review in 2 minutes, then record Loom or send update.

2.2 PR/Issue Watchlist

Daily digest: PRs waiting for review, issues that haven't moved, things that merged yesterday. No more manually checking GitHub.

2.3 Weekly Planning Auto-Populate

Before Sunday/Monday planning: auto-populate Notion tracker with last week's incomplete items, this week's calendar, open GitHub issues.

Phase 3: Life Systems (Feb-March)

Goal: Get house move and baby prep on rails

3.1 House Move Tracker

Simple Notion database: properties viewed (with notes), application status, key dates, shared with Grace.

3.2 Operation Naissance Structure

Expand pregnancy planning in Notion: timeline view through October, "Matt's responsibilities" checklist, linked to Todoist for shared tasks.

3.3 "Grace Asked Me To" Inbox

Dead-simple capture system (Todoist project or Notion inbox) where either can add things. Checked daily.

Phase 4: Deal Committee Agentic Setup (Ongoing)

Goal: Make 10 hrs/week feel like 2-3 hrs

4.1 Claude Code Integration

Set up Deal Committee repo with good context, create prompts for common tasks (new feature, bug fix, refactor), build muscle memory for agentic coding.

4.2 Product → Implementation Pipeline

Feature idea → Claude drafts spec → Review → Claude implements. Become the product mind; Claude does the grunt work.

Immediate Next Actions

#	Action	Timing	Status
1	Finish resume, send to friend for vetting	This week	In progress
2	Deal Committee partnership conversation (Tuesday)	Next Tuesday	Scheduled
3	Draft partnership proposal one-pager	Before Tuesday	To do
4	Grant Claude/GitHub access for automation	This week	To do
5	Create Morning Briefing prompt	This week	To do
6	House move — continue viewings	Ongoing	In progress

Note: GitHub Access

To enable the automation features in Phase 2 (What Shipped generator, PR/Issue Watchlist, Weekly Planning auto-populate), Claude needs access to your GitHub repositories. Options include:

- Grant access via Claude Code directly (if using Claude Code)
- Set up a GitHub Personal Access Token with repo read permissions
- Use GitHub API integration in a custom script
